

# 5G Symposium: Hidden Concerns of a 5G SmartCity

---

**Nick Chan MH, JP**

# About Myself

---

## **Nick Chan MH, JP**

- Honorary Legal advisor of Federation of Hong Kong Industries
- Honorary Legal Advisor of Smart City Consortium
- Founding Chairman of eBRAM International Online Dispute Resolution Centre
- Partner at Squire Patton Boggs
- Council member of CUHK

# What is a “SmartCity”

- Not defined by civil engineering projects
- **Focus on Digital Infrastructure**

# My Top 6 Immediate Concerns

---

1. Widening the digital divide
2. Unhealthy Competition
3. Biased/Unethical use of AI
4. Cybersecurity
5. Loss of Data Privacy
6. Limitations with Existing Legislation

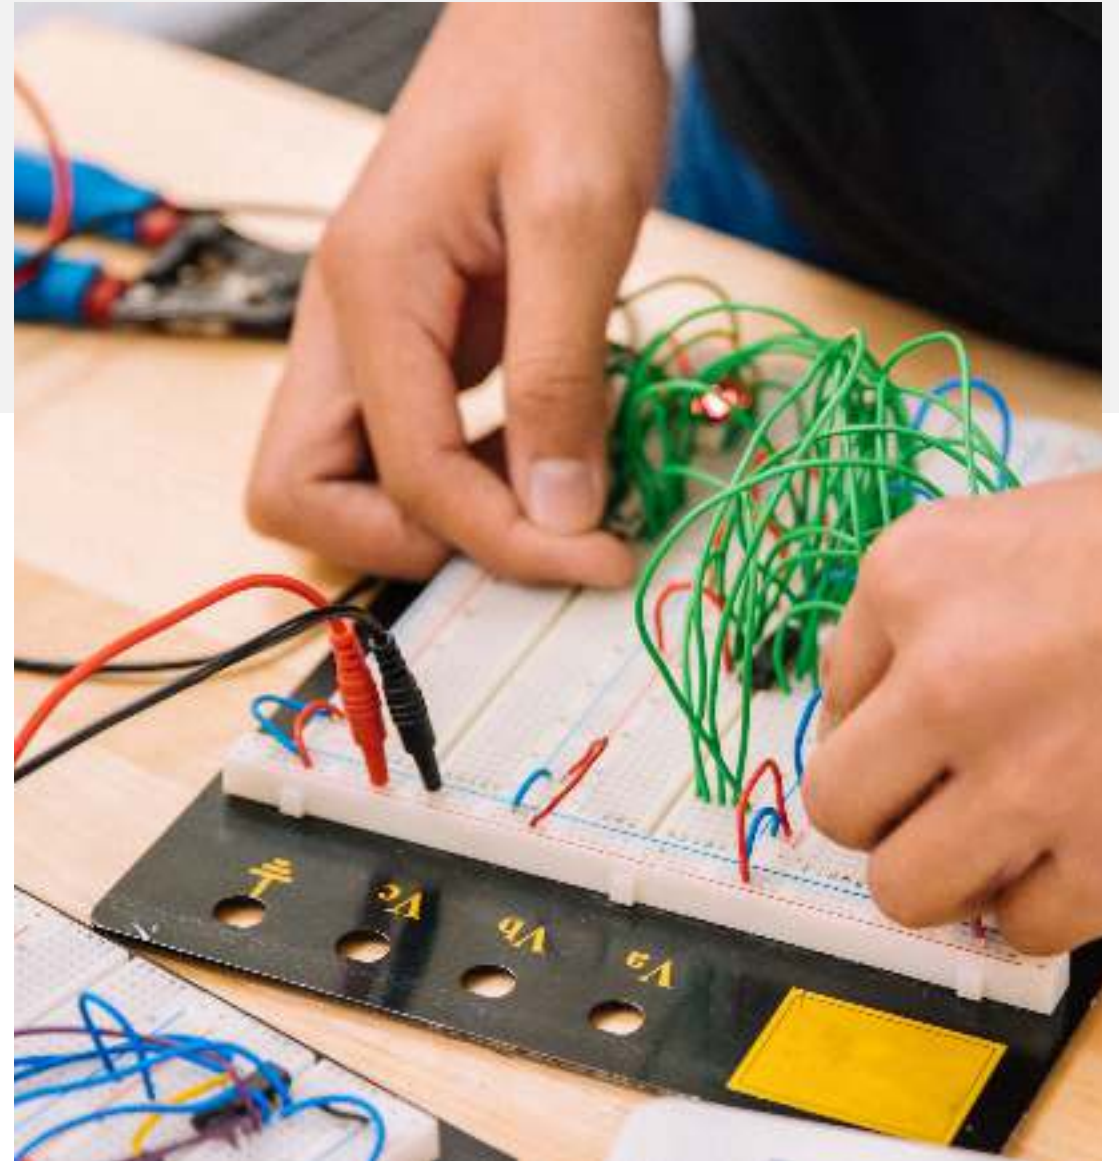

# 1<sup>st</sup> Concern: Widening the digital divide

- Create wealth gap
- leaving behind minority and underprivileged communities.

# Solutions: General Education

- **Support Minorities and Underprivileged Groups**
  - STEM education
  - E-learning
  - Telehealth

# Solutions: Develop Technological Infrastructure

- **Encourage Tech Uptake**
    - Build 5G base stations → “New Last Mile issue”
    - Industries should help different enterprises, like SMEs
- LEI
- LawTech, ODR to resolve disputes

# China

- **14<sup>th</sup> Five Year Plan (Ch.11, S1 and Ch.15, S2)**
  - Expand scope of 5G Network
    - Increase 5G users by 56%
    - Allow for the building of smart cities, e.g. Luoyang, Wuhan
  - Expand practical applications of 5G
    - Autonomous vehicles, smart manufacturing, smart healthcare, etc.
  - Establish foundation for future implementation of 6G
    - Create new access for international telecommunications

# Solutions: Promote Widespread Adoption of 5G

- Public/Private sector collaboration
  - Allocate scarce/critical resources for deploying 5G and reduce roll-out costs
- Avoid 5G driven digital divide

# Solutions: Promote Widespread Adoption of 5G

---

Create	Long-term 5G implementation strategy
Invest on	Nationwide 5G network development
Allow	Smart manufacturing, autonomous vehicles, digital healthcare, etc.

# Solutions: Financial/Infrastructure support from Government

Regionalize	5G
Enable	5G to be enjoyed in rural areas
Enable	Non-urban communities/businesses to participate in the digital economy
Foster	Industrial growth, management of natural disasters and resources

Solutions:  
Financial/Infrastructure  
support from  
Government

- Rural 5G connectivity scheme
- Target: Private mobile telecommunications operators
- Financial support to deploy 5G networks in rural areas

## 2<sup>nd</sup> Concern: Unhealthy Competition

---

- Too focused on short term financial gain
- Influenced by geopolitical issues
- Ultimately hurt consumers and the environment

# Solutions: Foster Fair Trade

## Encourage

- Healthy Competition

## Build

- Career neutral 5G base stations and installations

## Provide

- Cost effective 5G services to customers.

## Consider

- Enabling 5G licensing/trading and set review standards

## Support

- Compatibility and portability

## Reduce

- Risk of government driven trade oppression/illegal sanctions

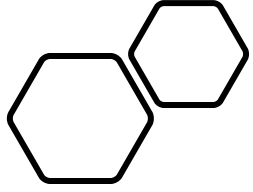

# Solutions: Improved Monitoring with 5G

---

- **Environmental Protection**

- Improve an organization's capacity with connected sensors
  - Fulfil whole-of-organization monitoring of energy consumption and waste management
- Real-time detection
  - Effective monitoring of energy/emissions efficiency.
  - Create cities that are more productive, less wasteful and have a high QoL

# Solutions: IoT Integration

- **5G Integration with Internet of Things (IoT)**

- Energy Efficient
- Real-time monitoring of energy consumption for better optimization

Examples: Appliance sensors, streetlights, transportation

# 3<sup>rd</sup> Concern: Biased/Unethical use of AI

---

AI profiling →  
Discrimination

Unethical  
surveillance  
practices

## Solution: Legal Regulation

---

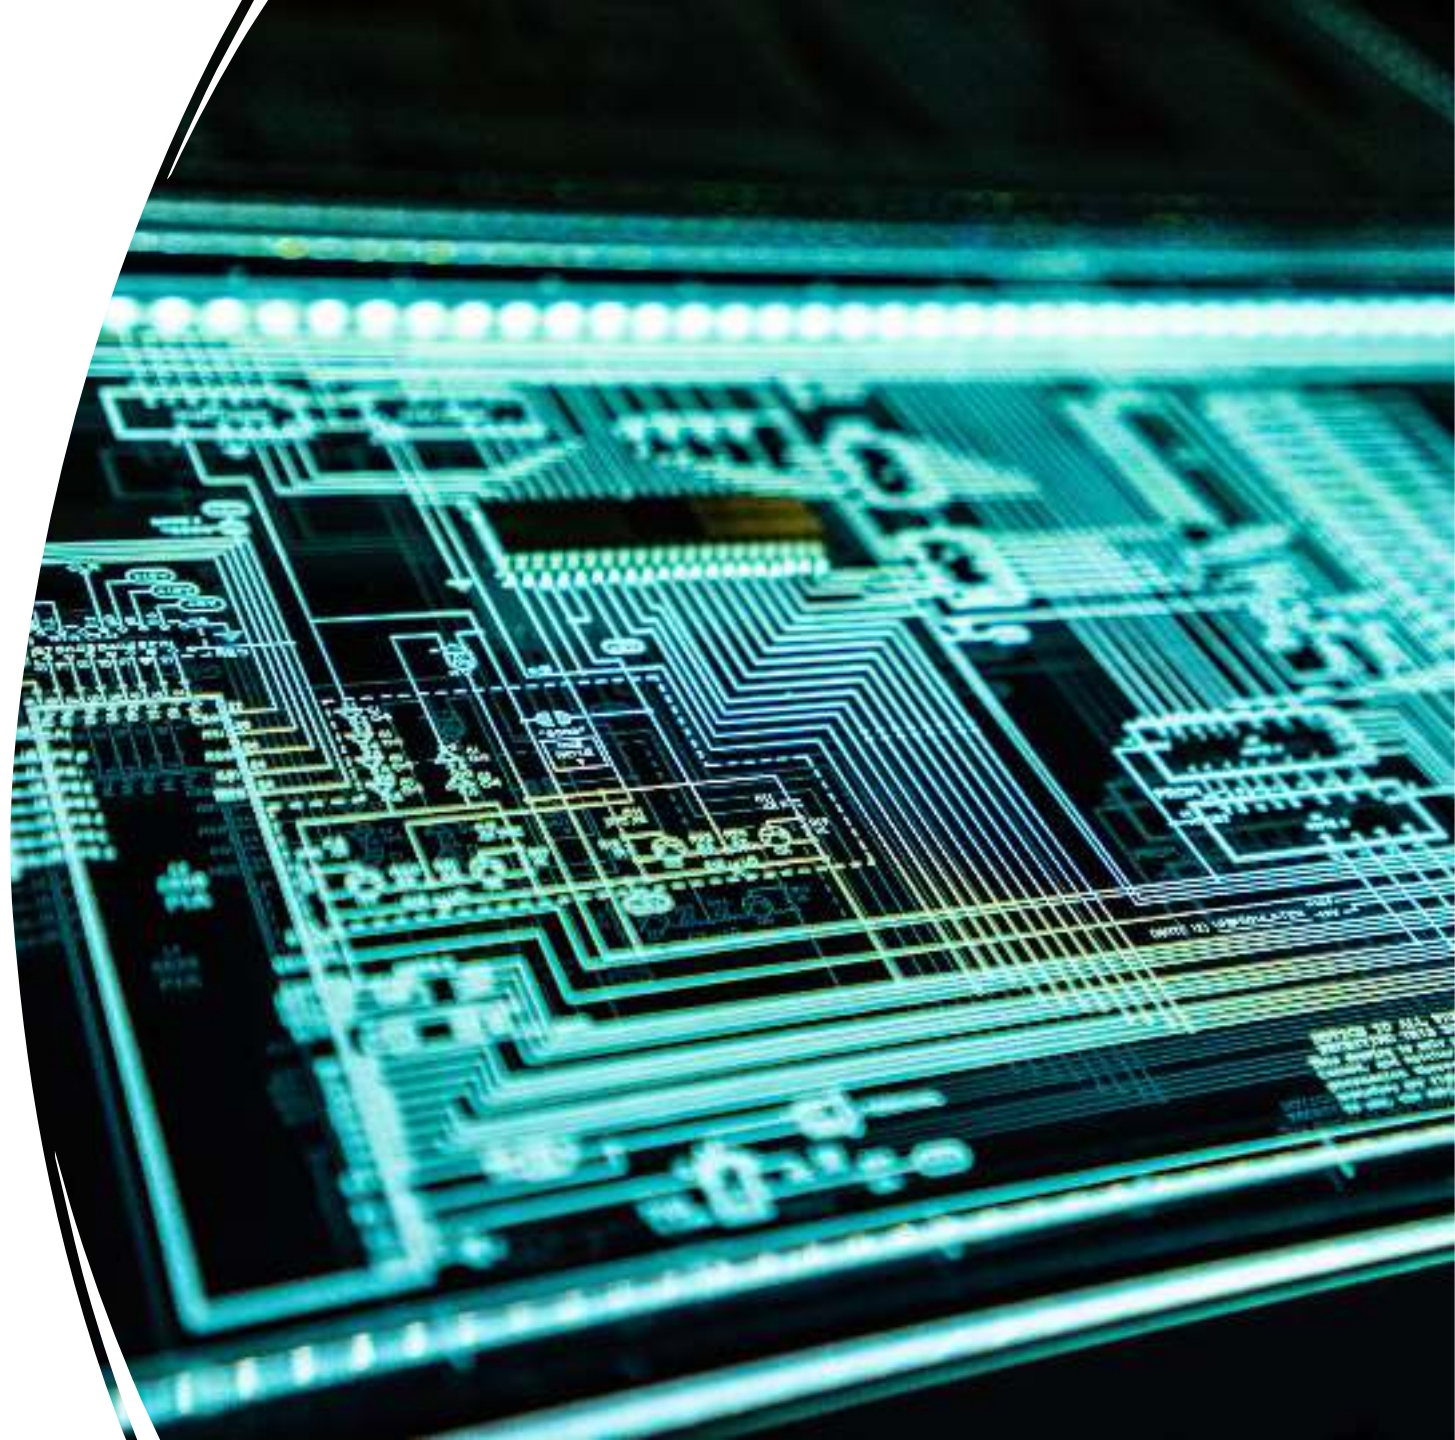

- **Refine relevant legislation to prevent such issues**
- Community discussion/consultation
- Self-regulation → laws/treaties
- Education

# 4<sup>th</sup> Concern: Cybersecurity

---

- Increased cybercrime over 5G
- New technologies → Deepfakes

# What are Deepfakes

---

AI specialized in creating convincing images, audio and video hoaxes

---

Employs a person's behavior to create entirely new content

---

Virtually indistinguishable from authentic content

---

Example: Dancing Queen Elizabeth, Tom Cruise as President

# Advantages of Deepfakes

- **Improve Quality of Life (QoL)**
  - Virtual influencers
  - Digital assistants
  - Medical diagnosis and treatment
- Develop new treatments without requiring actual patient data

# Dangers of Deepfakes

- **Cybercrimes**

- Criminals more proficient in developing deepfakes

- low costs and skill required nowadays

- Audio deepfakes could be used to scam firms/companies

YOUR PERSONAL  
RECOVERY SEED

DEVICE LABEL

**DO NOT DISCLOSE THIS SEED  
TO ANYBODY!**

# Dangers of Deepfakes

- **Non-Consensual Pornography**
    - Most online deepfakes are pornographic
  - **Fake News**
    - Project disinformation to manipulate public opinion
    - Political manipulation
- 

# How 5G relates to Deepfakes

---

Rapid development of 5G  
bandwidth

---

Increased Computing power of  
the cloud

---

Real-time manipulation of video  
stream

---

→ Videoconferencing,  
Livestreams, etc.

# Solution: Increase Security Awareness

01

Develop new  
legislation/technologies

02

Pass omnibus law  
against cybercrime

03

Utilize 5G to speed up  
development of  
deepfake recognition  
software

## 5<sup>th</sup> Concern: Loss of Data Privacy

- Fears of Personal data being infringed upon  
→ Smart lamp posts

# Solutions: Protect Data Privacy by Design

- **Respect Individual's data sovereignty**
  - Lawful 'data' exchanges
  - Federated Learning Initiatives
  - Business opportunities arising out of data privacy concerns?
- **Software Protection by 5G Providers**
  - Collaborate with cybersecurity firms
  - Develop encryption solutions, network monitoring, etc.
  - Develop Anti-virus solutions
  - Develop VPNs

# 6<sup>th</sup> Concern: Can't Keep Pace with Technology

Limitations with Existing Legislation

# Solutions: Refine Existing Legislation

## Update Current Laws

### Copyright laws

HK: Copyright Ordinance (Cap. 528)

Mainland: Copyright Law, Tort Liability Law

### Patent laws

HK: Patent Ordinance (Cap. 514)

Mainland: Patent Law

### Data privacy laws

HK: Personal Data (Privacy) Ordinance

Mainland: Personal Information Protection Law (PIPL)

# Solutions: Develop New Legislation

- **Develop Cybercrime laws**

- HK: Anti-money Laundering and Counter-Terrorist Financing (Amendment) Bill

- **Relax Potential Regulations**

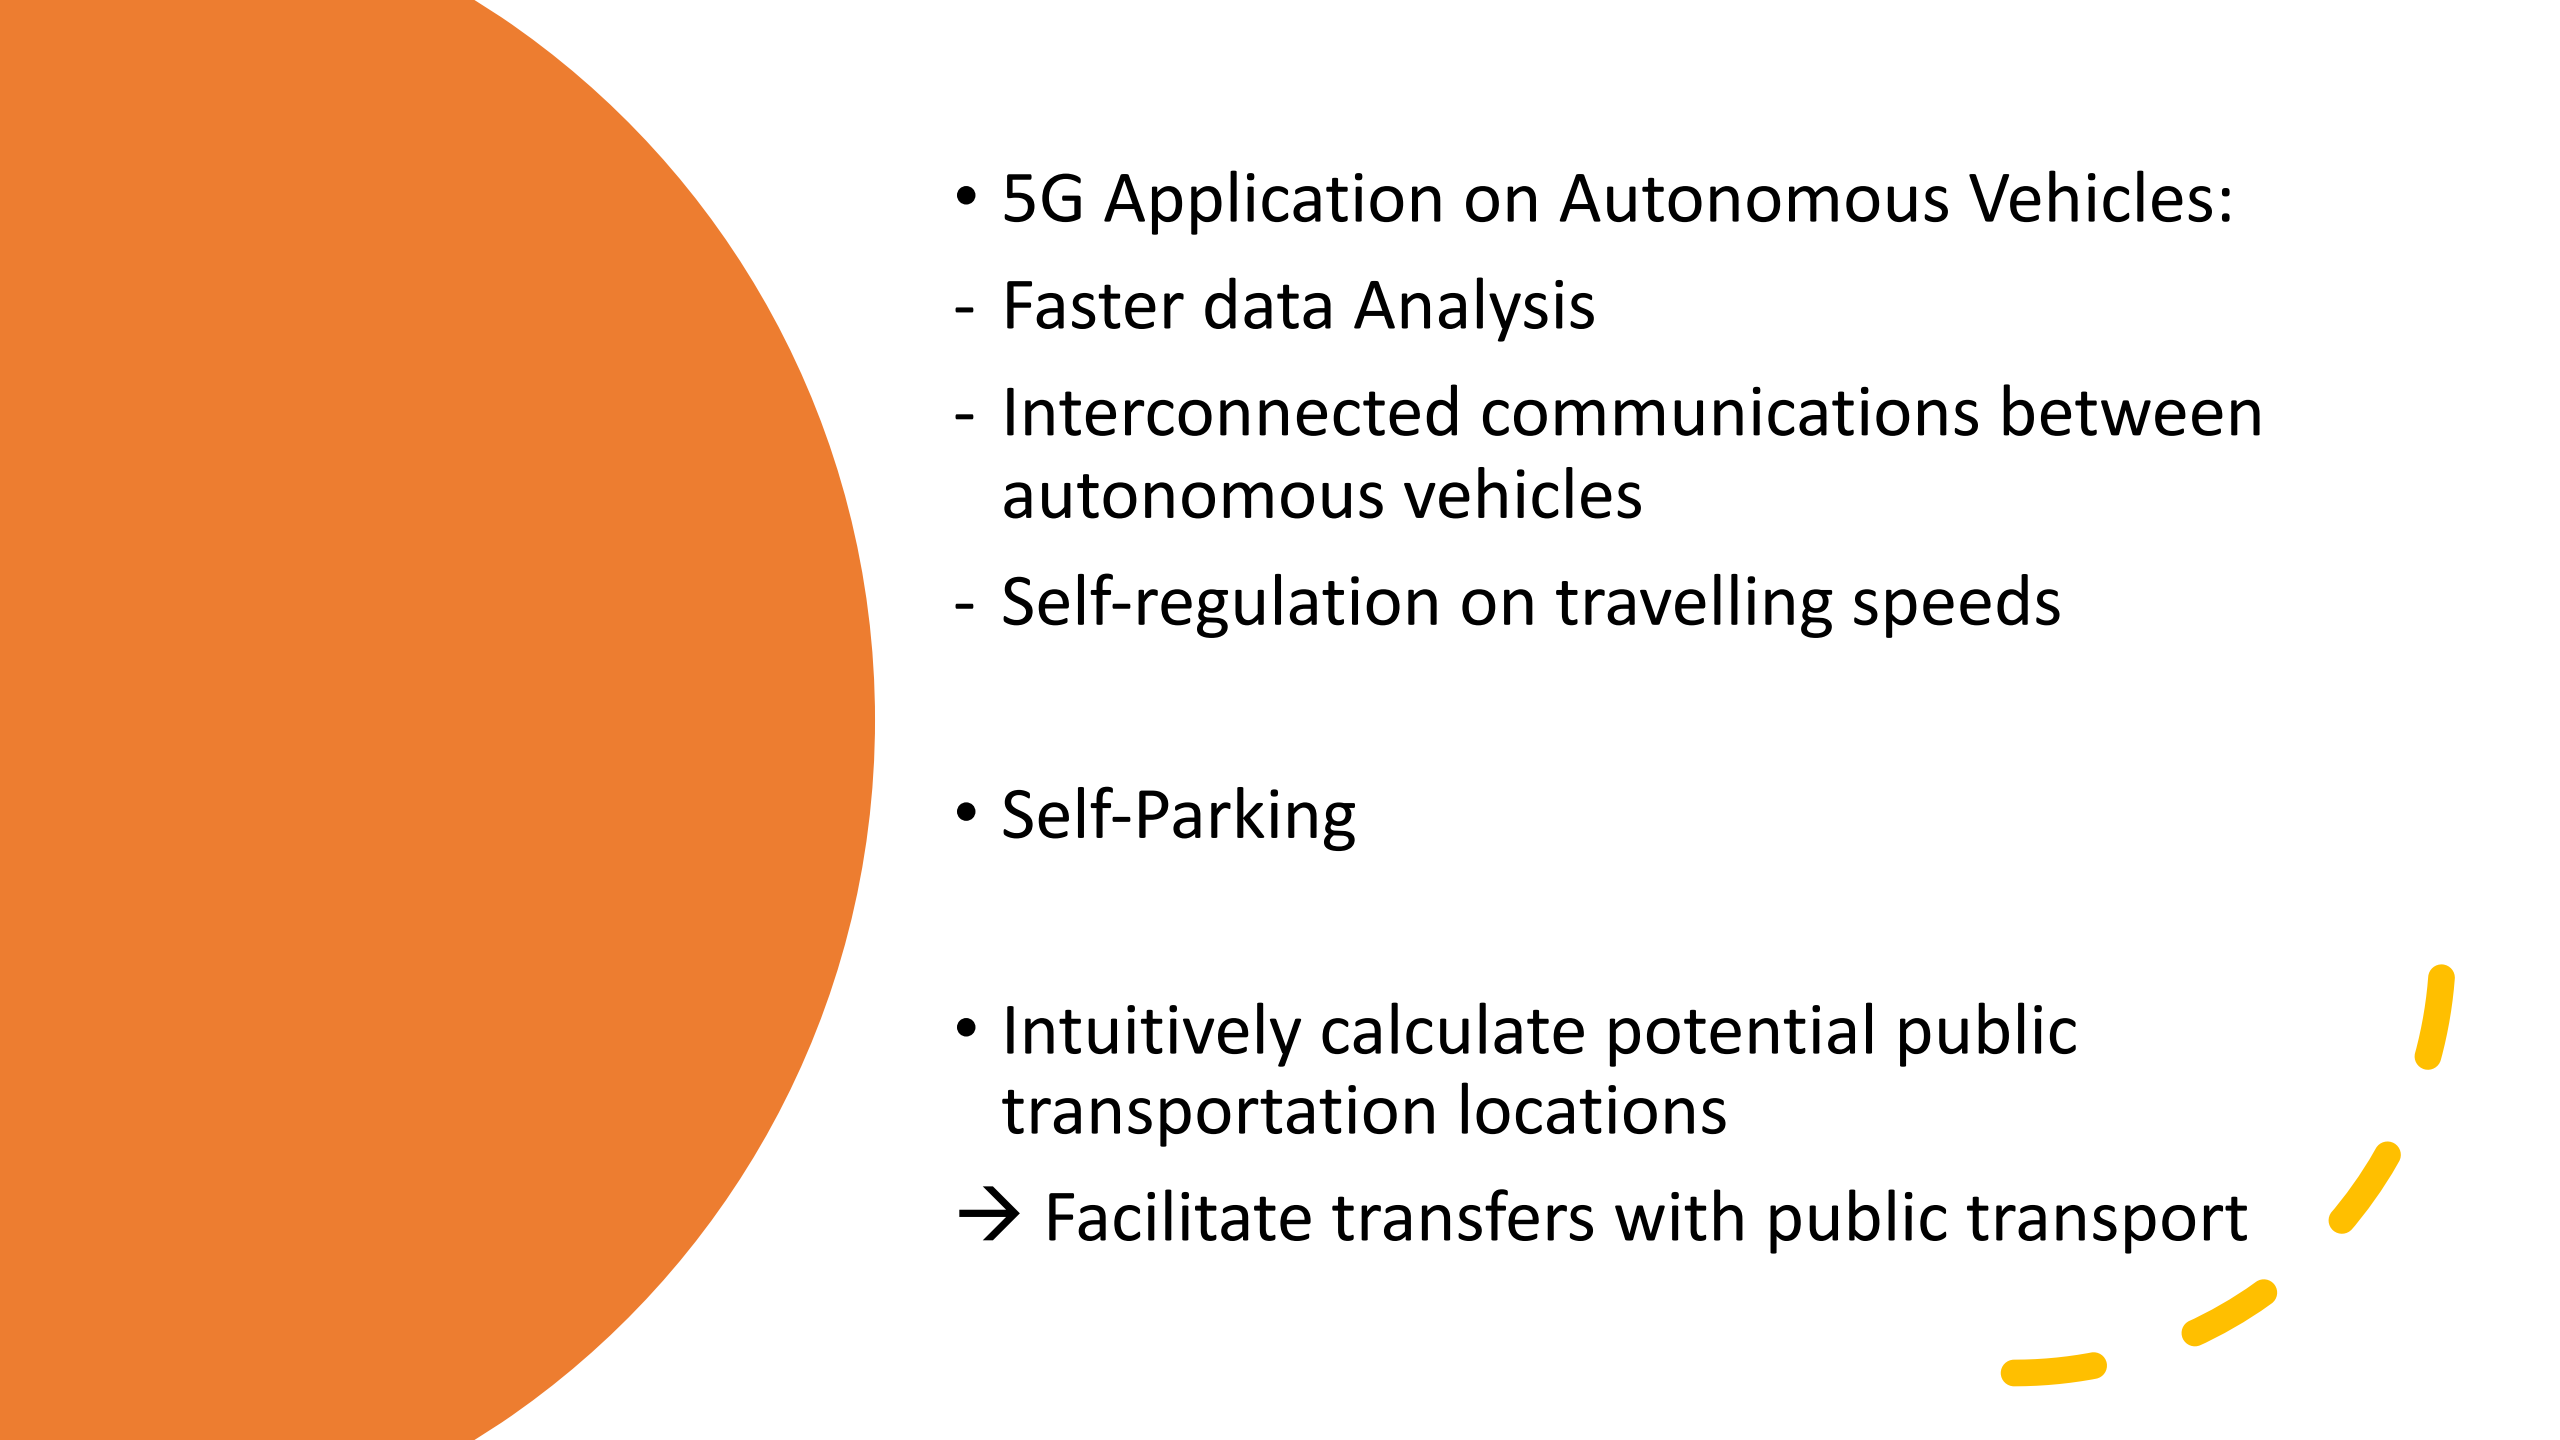

- Facilitate 5G development

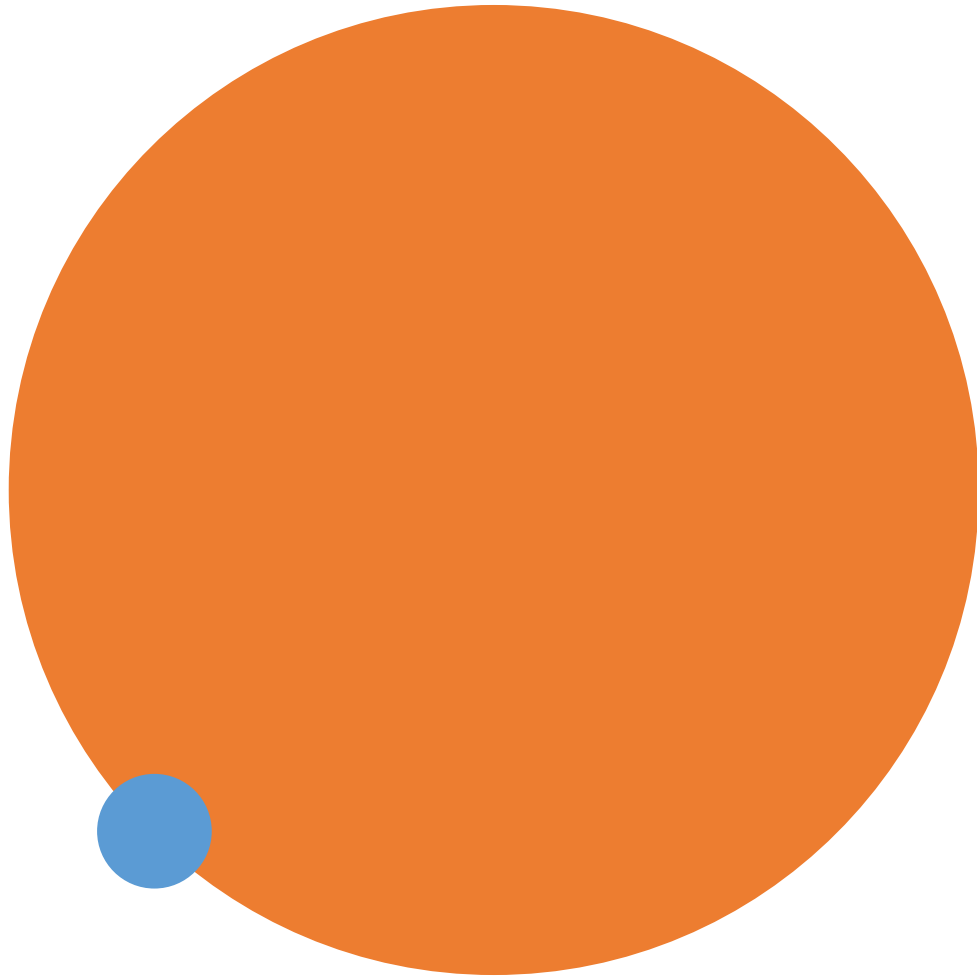

- Autonomous vehicles

- Drones

- Virtual entertainment

- 
- 5G Application on Autonomous Vehicles:
    - Faster data Analysis
    - Interconnected communications between autonomous vehicles
    - Self-regulation on travelling speeds
  - Self-Parking
  - Intuitively calculate potential public transportation locations
    - Facilitate transfers with public transport

- **Future:**
  - Initiate new policies to support autonomous driving
    - Smart City Blueprint 2.0 (2020)
    - Smart Mobility Roadmap (2019)
  - Refine existing regulations/policies
    - Guidance Notes on the Trials of Autonomous Vehicles
    - 'Movement Permit' scheme

Q&A

# Thank You
